Duke Energy and county officials to test sirens around Brunswick Nuclear Plant

- **A 5-30 second test scheduled between 10 a.m. and 11 a.m. on Wednesday, April 10.**
- **No public action required.**

SOUTHPORT, N.C. – The outdoor warning sirens around the Brunswick Nuclear Plant will be tested between 10 a.m. and 11 a.m. on Wednesday, April 10.

The 38 sirens within 10 miles of the Brunswick Nuclear Plant will sound for 5 to 30 seconds. To ensure they are functioning properly, it may be necessary to test some sirens more than once. Testing is performed in cooperation with emergency officials in Brunswick and New Hanover counties, who are responsible for sounding the sirens.

Because this is a test, local broadcasting stations will not interrupt regular programming to broadcast Emergency Alert System (EAS) messages. If there was ever a real emergency at the plant requiring the sirens to be sounded, local radio and television stations would broadcast information and instructions to the public.

For more information about the outdoor warning sirens, residents can refer to information available at [duke-energy.com/NuclearEP](https://www.duke-energy.com/NuclearEP).

Duke Energy Progress

Duke Energy Progress, a subsidiary of Duke Energy, owns nuclear, coal, natural gas, renewables and hydroelectric generation. That diverse fuel mix provides about 13,800 megawatts of owned electric capacity to approximately 1.7 million customers in a 28,000-square-mile service area of North Carolina and South Carolina.

Duke Energy

Duke Energy (NYSE: DUK), a Fortune 150 company headquartered in Charlotte, N.C., is one of America's largest energy holding companies. The company's electric utilities serve 8.4 million customers in North Carolina, South Carolina, Florida, Indiana, Ohio

BUILDING A **SMARTER** ENERGY FUTURE®

and Kentucky, and collectively own 54,800 megawatts of energy capacity. Its natural gas unit serves 1.7 million customers in North Carolina, South Carolina, Tennessee, Ohio and Kentucky.

Duke Energy is executing an ambitious clean energy transition, keeping reliability, affordability and accessibility at the forefront as the company works toward net-zero methane emissions from its natural gas business by 2030 and net-zero carbon emissions from electricity generation by 2050. The company is investing in major electric grid upgrades and cleaner generation, including expanded energy storage, renewables, natural gas and advanced nuclear.
