Duke Energy and county officials to test sirens around Brunswick Nuclear Plant

- **A five- to 30-second test is scheduled between 10 a.m. and 11 a.m. on Wednesday, July 10.**
- **No public action required**

SOUTHPORT, N.C. – The outdoor warning sirens around the Brunswick Nuclear Plant will be tested between 10 a.m. and 11 a.m. on Wednesday, July 10.

As part of our regular, quarterly testing, the 38 sirens within 10 miles of the Brunswick Nuclear Plant will sound for five to 30 seconds on July 10. To ensure they are functioning properly, it may be necessary to test some sirens more than once. Testing is performed in cooperation with emergency officials in Brunswick and New Hanover counties, who are responsible for sounding the sirens.

Because these are tests, local broadcasting stations will not interrupt regular programming to broadcast Emergency Alert System (EAS) messages. If there was ever a real emergency at the plant requiring the sirens to be sounded, local radio and television stations would broadcast information and instructions to the public.

For more information about nuclear emergency preparedness and outdoor warning sirens, residents can visit [duke-energy.com/NuclearEP](https://www.duke-energy.com/NuclearEP).

Duke Energy Progress

Duke Energy Progress, a subsidiary of Duke Energy, owns 13,800 megawatts of energy capacity, supplying electricity to 1.7 million residential, commercial and industrial customers across a 28,000-square-mile service area in North Carolina and South Carolina.

BUILDING A **SMARTER** ENERGY FUTURE®

Duke Energy

Duke Energy (NYSE: DUK), a Fortune 150 company headquartered in Charlotte, N.C., is one of America's largest energy holding companies. The company's electric utilities serve 8.4 million customers in North Carolina, South Carolina, Florida, Indiana, Ohio and Kentucky, and collectively own 54,800 megawatts of energy capacity. Its natural gas utilities serve 1.7 million customers in North Carolina, South Carolina, Tennessee, Ohio and Kentucky.

Duke Energy is executing an ambitious clean energy transition, keeping reliability, affordability and accessibility at the forefront as the company works toward net-zero methane emissions from its natural gas business by 2030 and net-zero carbon emissions from electricity generation by 2050. The company is investing in major electric grid upgrades and cleaner generation, including expanded energy storage, renewables, natural gas and nuclear.
